Campus Movie Night Booking Panel - Report

Tech Stack Used

- **HTML5:** Semantic markup and structure for the booking panel.
- **CSS3 (Vanilla):** Custom styling, responsive design, CSS Grid/Flexbox layouts, and dark-mode aesthetic.
- **Vanilla JavaScript:** DOM manipulation, event handling, dynamic pricing calculations, random surprise offers, and LocalStorage integration.

Project Explanation

The "Campus Movie Night Booking Panel" is a premium, college-level web application designed for students to easily book movie tickets. It features a modern, responsive user interface with a dark-mode theme.

Key functionalities include:

- **Dynamic Booking Logic:** Users can select a movie, choose show timings, and pick seat categories, with prices updating dynamically in real-time.
- **Interactive UI:** The app incorporates micro-interactions and a "Surprise Offer" feature that randomly generates discounts for users.
- **Media Integration:** A media gallery displays the selected movie's poster and an embedded trailer for an engaging user experience.
- **Data Persistence:** User selections and booking details are saved using LocalStorage, ensuring session persistence across page reloads.
